Why 100% of Audited SaaS Sites Fired Trackers Before Consent

We inspected 18 high-growth B2B SaaS & e-commerce domains in an isolated Chromium Clean-Room (empty cookie jar, zero clicks). Even on sites paying $15k+/yr for OneTrust or Cookiebot, third-party beacons fired in under 600ms.

Domains Leaking Pre-Consent Telemetry Before User Interaction

Async GTM Tags Beat Your Consent Banner by 450ms

Standard Consent Management Platforms load asynchronously. While the visual banner is still rendering on the DOM, hardcoded GTM triggers, Meta Pixel, LinkedIn Insight & Clarity already transmit IP, URL parameters, and device fingerprints.

+53ms — +606ms

Observed Window Where Unauthorized Beacons Escape Unblocked

Statutory Wiretapping Claims Don't Require a Data Breach

Plaintiff firms run automated HAR capture bots from California IPs. If third-party ad/replay SDKs intercept visitor communications prior to affirmative opt-in, statutory damages stack at up to $5,000 per violation.

$75K – $250K+

Typical Pre-Litigation Demand Settlement Range for Unsealed Sites

Every Payment-Page Script Now Needs SHA-384 Integrity

PCI DSS v4.0.1 mandates cryptographic Subresource Integrity (SRI) or strict CSP script-authorization ledgers plus weekly automated tamper/drift detection across every checkout and billing wrapper page.

92% Missing SRI

External Scripts Executing Without Cryptographic SHA-384 Hashes

Seal Pre-Consent Leaks at T=0ms With a 4KB Runtime Shim

Instead of 6 weeks of GTM refactoring, our synchronous 4KB Consent Firewall hooks fetch(), XMLHttpRequest, sendBeacon() & document.cookie at 0ms — queuing signals safely until Consent Mode v2 grants permission.
